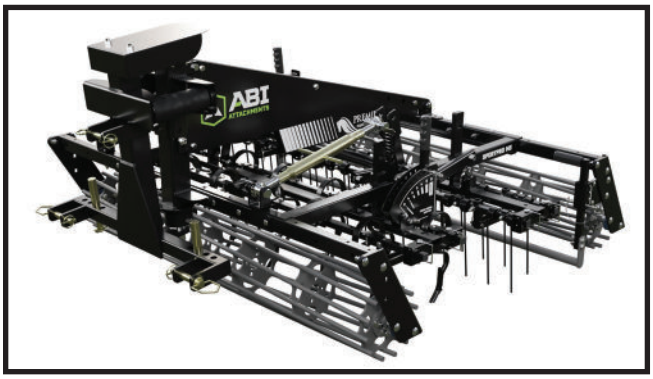
Form No. 10-80100 | Rev E | 10/21/2025

ABI ATTACHMENTS

Owner's Manual

SportPro Synthetic Arena Groomers

M1, M3 & M5



NOTE: This Owner's Manual covers several models. Features may vary by model. Not all features in this manual are applicable to all models and the model depicted may differ from yours.

For Your Records

Located on the front right side of the frame is an ID plate showing the serial number. Record your machine's information and serial number in the space provided below. ABI will use this information to give you prompt, efficient service when you order parts or need product support.

Safety

WARNING! The ***SAFETY ALERT SYMBOL*** indicates there is a potential hazard to personal safety involved and extra safety precaution must be taken. When you see this symbol, be alert and carefully read the message that follows it. In addition to design and configuration of equipment, hazard control, and accident prevention are dependent upon the awareness, concern, prudence, and proper training of personnel involved in the operation, transport, maintenance, and storage of equipment.

CALIFORNIA PROPOSITION 65

WARNING! Cancer and reproductive harm- www.P65Warnings.ca.gov

SAFETY AT ALL TIMES

Careful operation is your best assurance against an accident. All operators, no matter how much experience they may have, should carefully read this manual and other related manuals, or have the manuals read to them, before operating the tow vehicle and this implement.

- Thoroughly read and understand the "Safety Label" section. Read all instructions noted on them.
- Do not operate the equipment while under the influence of drugs or alcohol as they impair the ability to safely and properly operate the equipment.
- The operator should be familiar with all functions of the tow vehicle and attached implement and be able to handle emergencies quickly.
- Make sure all guards and shields appropriate for the operation are in place and secured before operating implement.
- Keep all bystanders away from equipment and work area.
- Start tow vehicle from the driver's seat with hydraulic controls in neutral.
- Operate tow vehicle and controls from the driver's seat only.
- Never dismount from a moving tow vehicle or leave tow vehicle unattended with engine running.
- Do not allow anyone to stand between tow vehicle and implement while backing up to implement.
- Keep hands, feet, and clothing away from power-driven parts.
- While transporting and operating equipment, watch out for objects overhead and along side such as fences, trees, buildings, wires, etc.
- Do not turn tow vehicle so tight as to cause hitched implement to ride up on the tow vehicle's rear wheel.
- Store implement in an area where children normally do not play. When needed, secure attachment against falling with support blocks.

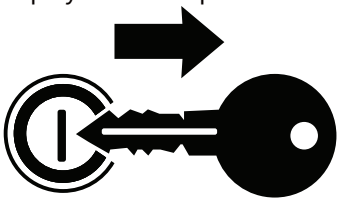
SAFETY PRECAUTIONS FOR CHILDREN

Tragedy can occur if the operator is not alert to the presence of children. Children generally are attracted to implements and their work.

- Never assume children will remain where you last saw them.
- Keep children out of the work area and under the watchful eye of a responsible adult.
- Be alert and shut the implement and tractor down if children enter the work area.
- Never carry children on the tractor or implement. There is not a safe place for them to ride. They may fall off and be run over or interfere with the control of the tow vehicle.
- Never allow children to operate the tow vehicle or implement, even under adult supervision.
- Never allow children to play on the tow vehicle or implement.
- Use extra caution when backing up. Before the tractor starts to move, look down and behind to make sure the area is clear.

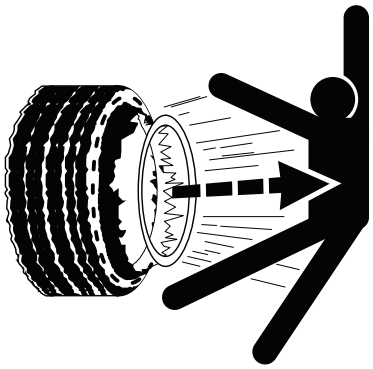
SHUTDOWN & STORAGE

- If engaged, disengage power take-off.
- Park on solid, level ground and lower implement to ground or onto support blocks.
- Put tractor in park or set park brake, turn off engine, and remove switch key to prevent unauthorized starting.
- Relieve all hydraulic pressure to auxiliary hydraulic lines
- Wait for all components to stop before leaving operator's seat.
- Use steps, grab-handles and anti-slip surfaces when stepping on and off the tractor.
- Detach and store implement in an area where children normally do not play. Secure implement using blocks and supports.



TIRE SAFETY

- Tire changing can be dangerous and must be performed by trained personnel using the correct tools and equipment.
- Always maintain correct tire pressure. Do not inflate tires above recommended pressures shown in the Operator's Manual.
- When inflating tires, use a clip-on chuck and extension hose long enough to allow you to stand to one side and NOT in front of or over the tire assembly. Use a safety cage if available.
- Securely support the implement when changing a wheel.
- When removing and installing wheels, use wheel handling equipment adequate for the weight involved.
- Make sure wheel bolts have been tightened to the specified torque.
- Some attachments may have foam or sealant inside them and must be disposed of properly.

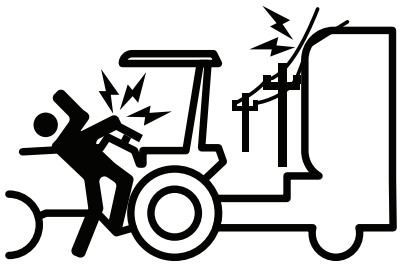


OPERATION SAFETY

- Stay alert for holes, rocks, and roots in the terrain and other hidden hazards. Keep away from drop-offs.
- Stop implement immediately upon striking an obstruction. Turn engine off, remove key, inspect and repair any damage before resuming operation.
- Never operate tractor and implement under trees with low hanging limbs. Operators can be knocked off the tractor and then run over by implement.

TRANSPORT SAFELY

- Comply with federal, state, and local laws.
- Use towing vehicle and trailer of adequate size and capacity Secure equipment towed on a trailer with tie downs and chains.
- Sudden braking can cause a towed trailer to swerve and upset. Reduce speed if towed trailer is not equipped with brakes.
- Avoid contact with any overhead utility lines or electrically charged conductors.
- Always drive with load on end of loader arms low to the ground.
- Always drive straight up and down steep inclines with heavy end of a tow vehicle with loader attachment on the "uphill" side.



- Engage park brake when stopped on an incline.
- Maximum transport speed for an attached equipment is 20 mph. DO NOT EXCEED. Never travel at a speed which does not allow adequate control of steering and stopping. Some rough terrains require a slower speed.
- As a guideline, use the following maximum speed weight ratios for attached equipment:
  - **20 mph** when weight of attached equipment is less than or equal to the weight of machine towing the equipment.
  - **10 mph** when weight of attached equipment exceeds weight of machine towing equipment but not more than double the weight.
- **IMPORTANT:** Do not tow a load that is more than double the weight of the vehicle towing the load.

PRACTICE SAFE MAINTENANCE

- Understand procedure before doing work. Refer to the Operator's Manual for additional information.
- Work on a level surface in a clean dry area that is well-lit.
- Lower implement to the ground and follow all shutdown procedures before leaving the operator's seat to perform maintenance.
- Do not work under any hydraulic supported equipment. It can settle, suddenly leak down, or be lowered accidentally. If it is necessary to work under the equipment, securely support it with stands or suitable blocking beforehand.
- Use properly grounded electrical outlets and tools.
- Use correct tools and equipment for the job that are in good condition.
- Allow equipment to cool before working on it.
- Disconnect battery ground cable (-) before servicing or adjusting electrical systems or before welding on implement.
- Inspect all parts. Make certain parts are in good condition & installed properly.
- Replace parts on this implement with genuine ABI Attachments parts only.
- Do not alter this implement in a way which will adversely affect its performance.
- Do not grease or oil implement while it is in operation.
- Remove buildup of grease, oil, or debris.
- Always make sure any material and waste products from the repair and maintenance of the implement are properly collected and disposed.
- Remove all tools and unused parts before operation.

PREPARE FOR EMERGENCIES

- Be prepared if a fire starts.
- Keep a first aid kit and fire extinguisher handy.
- Keep emergency numbers for doctor, ambulance, hospital,and fire department near phone.

USE SAFETY LIGHTS AND DEVICES

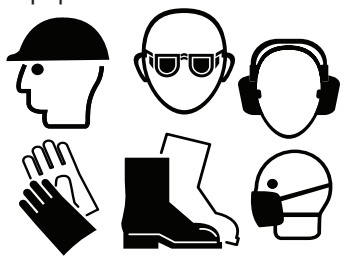
- Slow moving tractors, skid steers, self-propelled machines, and towed equipment can create a hazard when driven on public roads. They are difficult to see, especially at night. Use the Slow Moving Vehicle sign (SMV) when on public roads.
- Flashing warning lights and turn signals are recommended whenever driving on public roads.

AVOID UNDERGROUND UTILITIES

- **Dig Safe, Call 811 (USA** Always contact your local utility companies (electrical, telephone, gas, water, sewer, and others) before digging so that they may mark the location of any underground services in the area.
- Be sure to ask how close you can work to the marks they positioned.

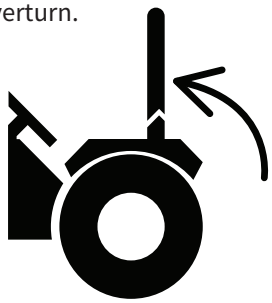
WEAR PERSONAL PROTECTION EQUIPMENT (PPE)

- Wear protective clothing and equipment appropriate for the job such as safety shoes, safety glasses, hard hat, and ear plugs.
- Clothing should fit snug without fringes and pull strings to avoid entanglement with moving parts.
- Prolonged exposure to loud noise can cause hearing impairment or hearing loss. Wear suitable hearing protection such as earmuffs or earplugs.
- Operating equipment safely requires the operator's full attention. Avoid wearing headphones while operating equipment.



USE SEAT BELT AND ROPS

- ABI Attachments recommends the use of a CAB or roll-over protective structures (ROPS) and seat belt in almost all tow vehicles. Combination of a CAB or ROPS and seat belt will reduce the risk of serious injury or death if the tow vehicle should be upset.
- If ROPS is in the locked-up position, fasten seat belt snugly and securely to help protect against serious injury or death from falling and machine overturn.

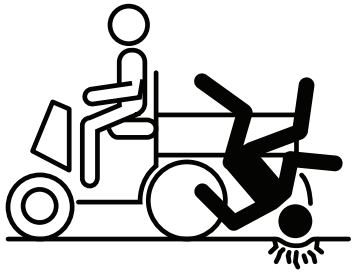


AVOID HIGH PRESSURE FLUIDS HAZARD

- Escaping fluid under pressure can penetrate the skin causing serious injury.
- Before disconnecting hydraulic lines or performing work on the hydraulic system, be sure to release all residual pressure.
- Make sure all hydraulic fluid connections are tight and all hydraulic hoses and lines are in good condition before applying pressure to the system.
- Use a piece of paper or cardboard, NOT BODY PARTS, to check for suspected leaks.
- Wear protective gloves and safety glasses or goggles when working with hydraulic systems.
- DO NOT DELAY. If an accident occurs, see a doctor familiar with this type of injury immediately. Any fluid injected into the skin or eyes must be treated within a few hours or gangrene may result.

KEEP RIDERS OFF MACHINERY

- Never carry riders on tractor or implement.
- Riders obstruct operator's view and interfere with the control of the tow vehicle.
- Riders can be struck by objects or thrown from the equipment. Never use tractor or implement to lift or transport riders.



Safety Labels

Uncrating Instruction & Setup

Initial Unpacking Instructions

Tools Needed:
- Gloves
- Safety Glasses
- Safety Shoes
- Tin Snips
- Knife

Fig 1.

Removing From Shipping Crate

1. Depending on the unit and options purchased, uncrating the unit can vary. Read instructions completely before continuing.

2. Confirm with packing slip that all components were shipped (**Fig 1**).

3. Cut any straps holding the unit onto the skid with Tin Snips (**Fig 2**). **WEAR GLOVES AND SAFETY GLASSES WHEN CUTTING THE METAL STRAPS. PLACE ONE HAND ON METAL STRAP WHILE CUTTING TO PREVENT STRAP FROM SPRINGING BACK TOWARD YOU AND CAUSE INJURY! (Fig 1). UNIT MAY SHIFT AS STRAPS ARE CUT, KEEP HANDS AND FEET CLEAR.**

4. Use a knife to remove any zip-ties, foam and or plastic wrap from unit (**Fig 3-5**). **BE CAREFUL TO NOT LET ANY COMPONENT FALL WHEN REMOVING ZIP-TIES OR PLASTIC WRAP THAT MAY CAUSE INJURY!**

3. Once unit is free of straps and or any packaged options, the unit can be removed from the skid.

- If the unit is set up with a 3 point hitch, simply back your tow vehicle up to the unit and attach the 3 point hitch, raise the unit and pull away from the skid (**Fig 6**).
- If the unit is set up with a tow behind hitch, some pre-assembly is required. See the "**Pre-Assembly instructions**" for assembling and removing unit from the skid.

Fig 2.

Fig 3.

Fig 4.

Fig 5.

Fig 6.

Uncrating Instruction (cont'd)

Pre-Assembly Instructions

Tools Needed:
- Gloves
- Safety Glasses
- Safety Shoes

1. After removing straps, zip-ties, foam and or plastic wrap from steps 2 and 3 from "**Removing From Shipping Crate**", lay hitch in front of unit with toplink brackets facing upwards (**Fig 7**). Remove Toplink pin from brackets and set aside.

2. Remove both Tongue Hitch Harness Clevis pins and washers from unit to mount the Tongue Hitch Harness (**Fig 8**).

3. Lift Tongue Hitch Harness so both ends are in between welded brackets on frame and both holes in Tongue Hitch Harness line up with holes in brackets welded to frame. Slide (1) washer onto each Clevis pin (removed in step 2) then re-insert each pin back through holes in brackets on frame and Tongue Hitch Harness (**Fig 9**). Slide (1) washer onto each Clevis pin then secure both pins by re-inserting R-clips (removed in step 2) back into hole closest to washer in Clevis pins (**Fig 10**).

4. Swing Toplink down and lift Tongue Hitch Harness until holes in Toplink brackets welded to Tongue Hitch Harness line up with hole through end on Toplink and re-insert pin (removed in step 1) (**Fig 11**).

5. Secure pin by re-inserting Lynch pin (removed in step 1) back into Toplink pin (**Fig 12**).

Removing Tow Behind Double Roller Unit From Shipping Crate

1. To remove unit from skid, Back tow vehicle up to hitch. Turn Toplink adjustment pin clockwise or Counter-Clockwise as needed to align the end of the hitch on the unit with hitch on tow vehicle (**Fig 13**).

2. Slide hitch pin through the top hitch plate on Tongue Hitch Harness then through hitch on tow vehicle then on through lower hitch plate on Tongue Hitch Harness (**Fig 14**).

3. Lower wheels by cranking wheel jack handle clockwise until wheels are fully extended (**Fig 15**).

4. Slowly drive the tow vehicle forward until unit is free of the skid (**Fig 16**).

Fig 7.

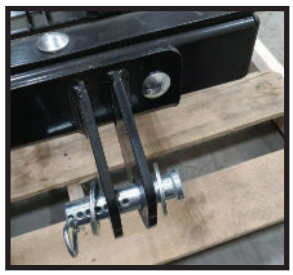


Fig 8.

Fig 16.

Uncrating Instruction (cont'd)

Removing Tow Behind Single Roller Unit From Shipping Crate

Tools Needed:
- Gloves
- Safety Glasses
- Safety Shoes
- Drill w/#2 SQ head attachment or #2 SQ screw driver
- Hammer

Fig 17A.

Fig 17B.

1. Before removing the unit from the skid, the wooden frame front support needs to be removed from the skid. Rotate the crank on the Jack Stand to raise the unit off the wooden frame front support (**Fig 18**).

2. Use a drill w/#2 SQ head attachment (**Fig 19**) or #2 SQ screw driver to remove the screws securing the wooden frame front support to the skid (**Fig 20**).

3. Use a hammer to knock the wooden frame front support free and remove from skid **(unit may shift some when removing the wooden support)** (**Fig 21, 22 and 23**).

4. Back tow vehicle up to hitch. Rotate the hand crank on the Jack Stand as needed to align the end of the hitch on the unit with hitch on tow vehicle (**Fig 24**).

5. Slide hitch pin through the top hitch plate on Tongue Hitch Harness then through hitch on tow vehicle then on through lower hitch plate on Tongue Hitch Harness (**Fig 25**).

6. To keep the S-Tines from dropping in between the skid slats, widen the Hitch Toplink by rotating the Toplink handle - this will raise the unit lifting the S-Tines up away from the skid slats (**Fig 26 and 27**).

7. Fully extend the wheels by rotating the hand crank on the wheel assembly jack clockwise until the hand crank will not rotate anymore (**Fig 28**).

8. Fully Retract the Jack Stand on the front right side of the unit (**Fig 29**).

9. Pull out the Jack Stand Pin, rotate the Jack Stand and re-insert the pin to secure Jack Stand in stowed position (**Fig 30**).

10. Slowly Drive the tow vehicle forward until unit is free of the skid (**Fig 31**).

Swapping out S-Tines and Scarifiers

Tools Needed:
- Gloves
- Safety Glasses
- Safety Shoes
- Hammer
- Wood Block
- May need Pry Bar
- May need Jack or Jack Stand

Installing Scarifiers on groomer with S-Tines currently installed

To swap out S-Tines on the groomer with Scarifiers, ABI highly recommends this be completed with two people to avoid injury.

1. Rotate the Toplink that raises the S-Tine assembly high enough to allow room to remove the S-Tine sub-assemblies (**Fig 32**).

2. Pull the pin that secures the pitch (angle) control lever and pull the lever all the way forward and re-insert the pin to allow more room for S-Tine sub-assemblies removal (**Fig 33**).

3. On the front sub-assembly, pull the (4) pins that secure the (4) Pivot Lock Tubes and remove the Pivot Lock Tubes (**Fig 34, 35 and 36**).

4. On each side of the groomer on the underside of the S-Tine assembly are linkages held together by clevis pins. Remove the clip at the end of one clevis pin on each side of the groomer and remove the clevis pins and let the linkages hang (**Fig 37and 38**).

5. Grab the loosened the front sub-assembly with both hands and pull until free from the frame (**Fig 39**).

7. On the rear S-Tine sub-assembly, pull the pin securing the pitch (angle) lever handle (**Fig 40**).

8. Pull off the plastic hand grip from the pitch (angle) lever handle (**Fig 41**).

6. Pull the (4) pins that secure the (4) Pivot Lock Tubes and remove the Pivot Lock Tubes (like what was done on the front sub-assembly) (**Fig 42**).

9. Grab the loosened rear sub-assembly with both hands and pull until free from the frame (**Fig 43**).

10. Slide both sub-assemblies out from under the groomer and set aside.

11. Slide the 1st Scarifier tube under the groomer (**Fig 44**).

12. If the Scarifiers are attached to the tube, remove them by pulling out the pin and sliding the scarifiers out of the slots (**Fig 45 and 46**).

Fig 32.

Fig 33.

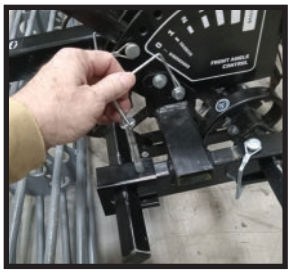

Fig 34.

Fig 35.

Fig 36.

Fig 37.

Fig 38.

Fig 39.

Fig 40.

Fig 41.

Swapping out S-Tines and Scarifiers (cont'd)

13. The Scarifier front and rear tube is the same tube with an "F" stamped on one side and an "R" stamped on the other (**Fig 47 and 48**). This is specific for the spacing of the scarifiers between the front and rear tubes when mounted to the groomer. There are 2 sizes of slots on both sides of the groomer tube. This will allow the Scarifiers to only be mounted from the underside of the tube in a specific pattern on each tube.

14. Lift the front tube up to the frame with the "F" stamp facing upwards (depending on the revision the "F" may be facing toward the front of the groomer or facing the rear of the groomer (**Fig 49**).

15. If you have no one to help, try using a jack or jack stand on the other side of the groomer to hold up the other end of the Scarifier tube to keep it level while sliding the tube onto the frame (**Fig 50**).

16. If needed, a hammer can be used to gently tap the front face of the tube on each end, alternating back and forth frequently to avoid binding up the tube while guiding it onto the frame. Tap the tube until the holes in the tube line up with the holes in the frame (**Fig 51 and 52**).

17. Insert (4) Pins through both the holes in the Scarifier tube and frame then secure the pin with the clip on the underside of the Scarifier tube (**Fig 53 and 54**).

18. Re-insert Scarifiers (with curved in facing toward the front of the groomer) and secure Scarifiers to tube using the Lynch Pins (**Fig 55 and 56**).

19. To install the rear Scarifier tube, repeat steps 2 through 7 (like what done to mount the front tube) with the "R" stamp facing upwards (**Fig 57**).

20. Once the rear tube is installed, re-attach the scarifiers (like what was done on the front tube) and the groomer is ready (**Fig 58 and 59**).

Installing S-Tines for the 1st time on a groomer set up with Scarifiers

If the S-Tine option kit is ordered to add to a groomer currently setup only for Scarifiers, follow the instruction sheet supplied with the S-Tine option kit.

Operation Guide

The M1 and M3 are tow behind arena groomers to be used behind either an ATV or UTV while the M5 is a 3 pt hitch style to be used with a CAT 1 tractor .
When discussing left and right sides of the arena groomer, it will be as though sitting in the tow vehicle seat and facing forward.
Once you have arrived at your arena and are ready to groom, fully retract the wheels (M1 or M3 style) by cranking the wheel jack counterclockwise until the handle can no longer rotate (**Fig 60**). **Failure to fully retract the wheels can result in plugging of the tool.**

S-Tines/Scarifiers Adjustment

In the front section of the groomer are either the S-Tines (**Fig 61**) or Scarifiers (**Fig 62**), depending on which component was ordered.
To adjust the S-Tines or Scarifiers:

- S-Tines are usually used for arenas that require mixing or have limited moisture and clay. S-Tines can be adjusted for both depth and pitch independently. S-Tines pitch (angle) can be adjusted to different settings depending on desired result by pulling the pin and adjusting the lever handle (**Fig 63**) then re-inserting the pin back through the side plates AND THE HOLE IN THE HANDLE - "PASSIVE" for remixing materials (**Fig 64**) up to "ACTIVE" for more aggressive engagement of the material, pulling up fibers that have settled down near the base and may also be used for breaking up compaction (**Fig 65**). They can be raised or lowered by rotating the left Toplink as needed for desired depth (**Fig 66**). The S-Tines have an infinite amount of depth settings up to a 4" depth shown by the max depth gauge (**Fig 67**). 0" depth is when the S-Tines are set in the "ACTIVE" setting (vertical) and the tips are at ground level.
- Scarifiers are usually used for arenas with a lot of clay, denser fiber or large amounts of water applied. Scarifiers are used to break up hard compacted materials. Scarifiers can be adjusted up or down by rotating the left Toplink as needed for desired depth (**Fig 68**). The Scarifiers have an infinite amount of depth settings up to a 4" depth. 0" depth is when the scarifiers tips are at ground level (**Fig 69**). Scarifiers do not have a pitch adjustment.

Coil Tines Adjustment

In the mid section of the groomer are the Coil Tines (**Fig 70**). Coil Tines can be adjusted up and down as well as their pitch (angle).
Coil Tines pitch (angle) can be adjusted to different settings depending on desired result pulling the pin and adjusting the lever handle (**Fig 71**) then re-inserting the pin back through the side plates AND THE HOLE IN THE HANDLE - "PASSIVE" for filling in grooves and pressing down large fibers (**Fig 72**) up to "ACTIVE" for arrogating and leveling the arena surface (**Fig 73**).
To adjust up and down, rotate the right Toplink as needed for desired depth (**Fig 74**). The Coil Tines have an infinite amount of depth settings up to a 4" depth shown by the max depth gauge (**Fig 75**) when Coil Tines are set in the "ACTIVE" setting.

Operation Guide (cont'd)

Fig 70.

Fig 71.

Fig 72.

Fig 73.

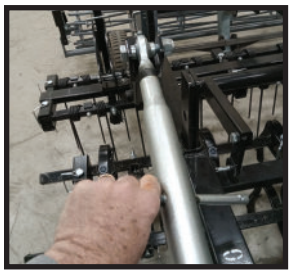

Fig 74.

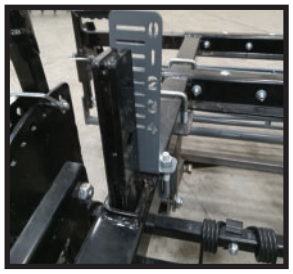

Fig 75.

Smoothing Bar Adjustment

Toward the rear of the groomer is the Smoothing Bar (**Fig 76**).

The Smoothing Bar levels out any build up of material and fills in any lines or grooves. The underside of the Smoothing Bar smooths the material. The excess material flows over the top of the Smoothing Bar to prevent build up and plugging.

The plates that secure the Smoothing Bar to the groomer frame have (4) holes spaced 1" apart. The Smoothing Bar Handles have (4) holes spaced 3/4" apart. By matching the holes in the Smoothing Bar Handles with the holes in the plates, the Smoothing Bar can be adjusted in 1/4" increments for a total travel of 5.25" by pulling the pin on each side of the groomer and raising or lowering to the desired height (**Fig 77 and 78**). The "1", "2", "3" and "4" decals on both sides of the groomer are to use as references to make sure both sides are equally set so the Smoothing Bar is level to the arena. Ensure the holes in the handle match side to side with the numbers on the decals to keep bar smooth.

It is recommended that the smoothing bar be set at "grade" level or slightly above to knock off any high points and prevent excessive material build up on the smoothing bar..

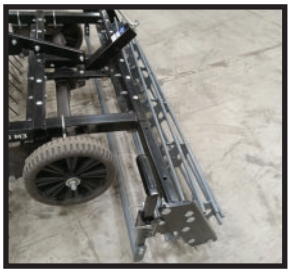

Fig 76.

Fig 77.

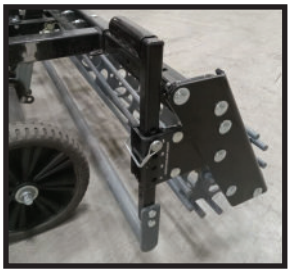

Fig 78.

Operation Guide (cont'd)

Initial 3pt Hitch Setup

The M5 arena groomer is a 3 pt hitch style to be used with a CAT 1 tractor. Follow the steps below for 1st time setup. After setup is complete, be sure to leave toplink attached to the arena groomer when disconnecting from tractor so settings will be unaffected.

Setting the Turning Hitch Latch Plate and Wedge

1. Set the arena groomer on the ground.

2. The frame of the arena groomer is to be level with the ground.

To level the frame on a dual roller style, have the arena groomer attached to the 3pt hitch and the rollers setting on the ground. Adjust the toplink until the 3pt Ball Mount Turn Weldment post and the 3pt Cat 1 Connection Turn Weldment post are parallel with each other (**Fig 79**).

To level the frame on a single roller style, have the arena groomer attached to the 3pt hitch and the roller setting on the ground. Adjust the three point arms on the tractor until the arena groomer frame looks level. Now adjust the toplink until the 3pt Ball Mount Turn Weldment post and the 3pt Cat 1 Connection Turn Weldment post are parallel with each other (**Fig 79**). Recheck the frame to see if it's still level. If not, repeat these steps until the frame is level and the posts are parallel with each other.

3. During operation the vertical post on the 3pt Cat 1 Connection Turn Weldment needs to be parallel with the vertical post on the 3pt Ball Mount Turn Weldment (**Fig 79**). Rotate Toplink on 3pt hitch clockwise or counter-clockwise as needed until posts are parallel. This will allow the Turning Hitch Latch Plate to be free of the Turning Hitch Latch Wedge so the arena groomer can turn with the tractor (**Fig 80**). **(COVER PLATE HAS BEEN REMOVED FOR PICTORIAL PURPOSES ONLY. THE COVER MUST BE IN PLACE AT ALL TIMES (EXCEPT MAINTENANCE) TO AVOID SERIOUS INJURY TO HANDS AND FINGERS!)**

4. When the arena groomer is lifted off the ground the large dual springs on the 3pt hitch push the vertical weldment posts together locking the Turning Hitch Latch Plate into the Turning Hitch Latch Wedge so the arena groomer will not pivot left or right when pulling out of the arena or taking the arena groomer short distances (**Fig 81**).

5. When taking the arena groomer long distances while still attached to the 3pt hitch, raise the arena groomer off the ground then lift and rotate the Travel Lock Handle down to prevent the arena groomer from pivoting left or right (**Fig 82**). **REMEMBER TO RAISE THE TRAVEL LOCK HANDLE BACK UP BEFORE GROOMING AN ARENA** (**Fig 83**).

Fig 79.

Travel Lock Unlocked

Operation Guide (cont'd)

Setting the Stop Pins

The stop Pins located on each end of the 3pt Cross Tube prevent the arena groomer from contacting the tractor tire when making sharp turns.
There are 4 holes on each end of the 3pt Cross Tube to adjust the Stop Pin location. Follow the steps below to determine the best hole to use to allow the most pivoting of the arena groomer without contacting the tractor tire:

1. With the arena groomer on the ground attached to the 3pt hitch on the tractor and both Stop Pins in the inner most hole on both ends of the 3pt Cross tube (**Fig 84**), slowly turn the tractor sharp to the right.

2. If the arena groomer does not come in contact with the tractor tire, the setting is good.

3. If the arena groomer does come into contact with the tractor tire, straighten the tractor back out and pull the R-clip securing the Stop Pin to the 3pt Cross Tube, pull the Stop Pin out of the inner most hole (**Fig 85**) and insert it to the next hole (**Fig 86**). Replace the R-clip to secure the Stop Pin to the 3pt Cross Tube (**Fig 87**).

4. Slowly turn the tractor sharp to the right again. If the arena groomer still comes in contact with the tractor tire, repeat step 3 and move the Stop Pin out another hole. Continue this process until the arena groomer no longer comes in contact with the tractor tire.

5. Repeat steps 1 through 4 only turning to the tractor to the left and adjust the left Stop Pin until the arena groomer does not come in contact with the left tractor tire.

Tips for Grooming with 3pt SportPro

1. To adjust the groomer attachments depths, drive in a straight line and intermittently stop about every 20ft to evaluate the amount of material being moved/groomed and adjust the attachments, if necessary, in small increments until the desired amount of material is being moved.

2. Do Not make quick sharp turns with arena groomer raised without engaging the Travel Lock on 3pt Hitch.

3. Do Not overlap groomed and ungroomed surfaces while loosening material - arena groomer will trail sideways.

4. When exiting the arena, slowly raise the arena groomer and allow it to center before exiting through the gates or other restrictions.

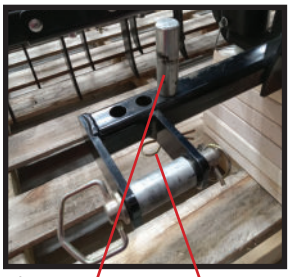

Fig 84.

Fig 85.

Fig 86.

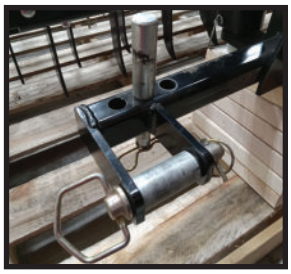

Fig 87.

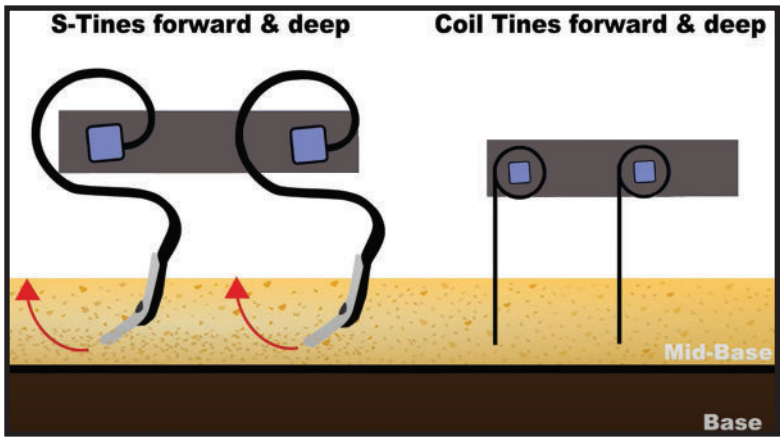
Operation Guide (cont'd)

Tips for Arena Grooming

1. If a component of the tool is plugging, raise that component. By raising the ground engaging component, it will allow material to flow better and pass through the tool eliminating the plugging.

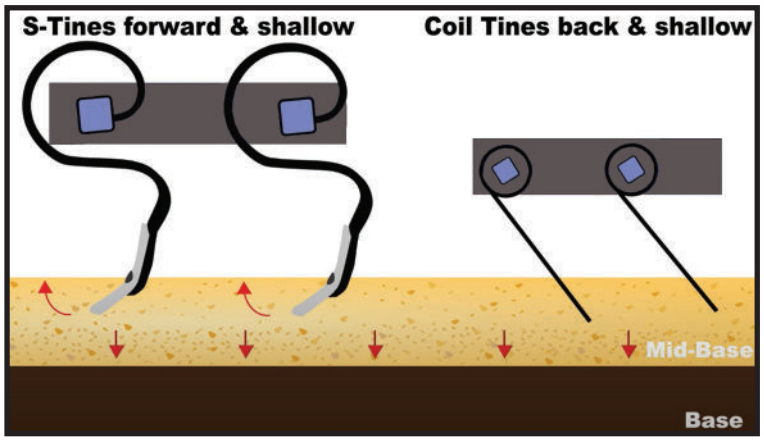
S-TINES ANGLED FORWARD & DEEP/COIL TINES FORWARD & DEEP

This setting will let the S-Tines lift small particles that have settled near the base and also will mix footing additives. Avoid contact with base material as well as base mats or a separation cloth if installed. The Coil Tines will break up chunks and help mix and blend the arena surface.



S-TINES ANGLED FORWARD & SHALLOW/COIL TINES BACK & SHALLOW

This setting will let the S-Tines mix the top surface while compacting the mid-base. The Coil Tines will help push material down and help pack as well as vibrate, filling in the grooves from the S-Tines.

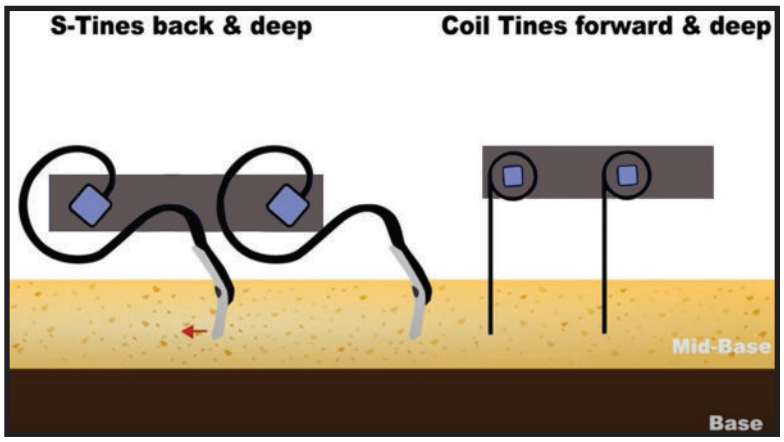


Operation Guide (cont'd)

Tips for Arena Grooming (cont'd)

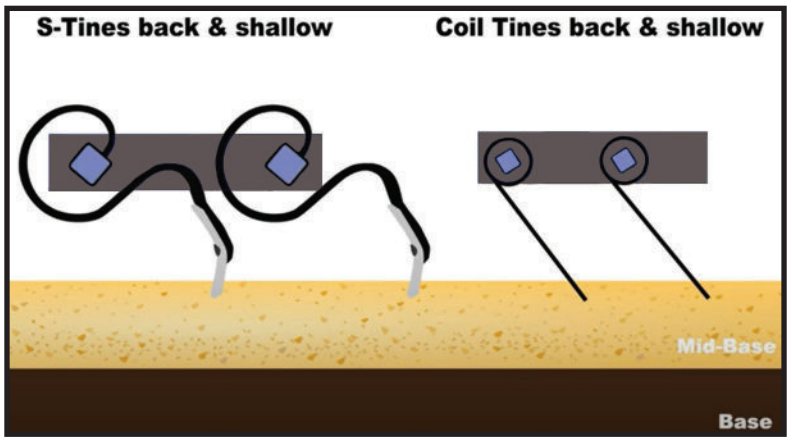
S-TINES ANGLED BACK & DEEP/COIL TINES FORWARD & DEEP

This setting will let the S-Tines scrape hard spots in the base as well as loosen and redistribute material and sand to level the arena surface. The Coil Tines will break up chunks and help mix and blend the arena surface.



S-TINES ANGLED BACK & SHALLOW/COIL TINES BACK & SHALLOW

This setting will let the S-Tines level and fluff the top layer of the arena surface. This position also protects the base mat or separation layer cloth if the arena has one. The Coil Tines will fill in the grooves from the S-Tines and help compact the mid-base.



Maintenance

Toplinks - Be sure to keep the threaded parts of toplinks silicone spray lubricant so they don't seize over time (**Fig 88**).

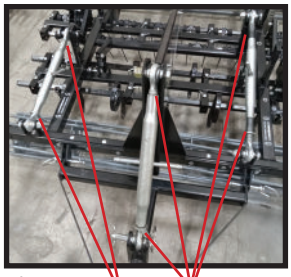


Fig 88. Grease threaded portion of Toplinks.

Roller Bearings - The bearings on both ends of the Roller should be greased every 3 months. They should also be greased before any long period of storage (**Fig 89 and 90**).

Fig 89. Location of Grease Fitting on Wheel Hub Assembly.

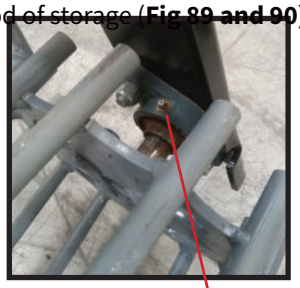

Fig 90. Location of Grease Fitting on Wheel Hub Assembly.

M5 3PT HITCH - Annually inspect the wear on the TURNING HITCH LATCH PLATE and TURNING HITCH LATCH WEDGE by removing the TURNING HITCH TOP COVER and confirm the plate and wedge do not have excessive wear or do not fit firmly together. If too much wear is found on either the plate or wedge or both, remove them using (2) 3/4" wrenches (or socket set) to remove the plate and (2) 9/16" wrenches (or socket set) for the wedge and replace with new ones. **SEE PAGES 36 & 37 FOR REPLACEMENT PART NUMBERS**. While the plate and wedge are disassembled, lower the TURN 3PT CAT I CONNECT WELDMENT and apply silicone spray lubricant to the Ball Hitch then raise the TURN 3PT CAT I CONNECT WELDMENT and reassemble the new plate and wedge and cover (**Fig 91**).

Finish – To prevent rust from developing on a surface due to scratches on the tool, use a rust stopping primer and semi-gloss black paint to refinish the damaged area.

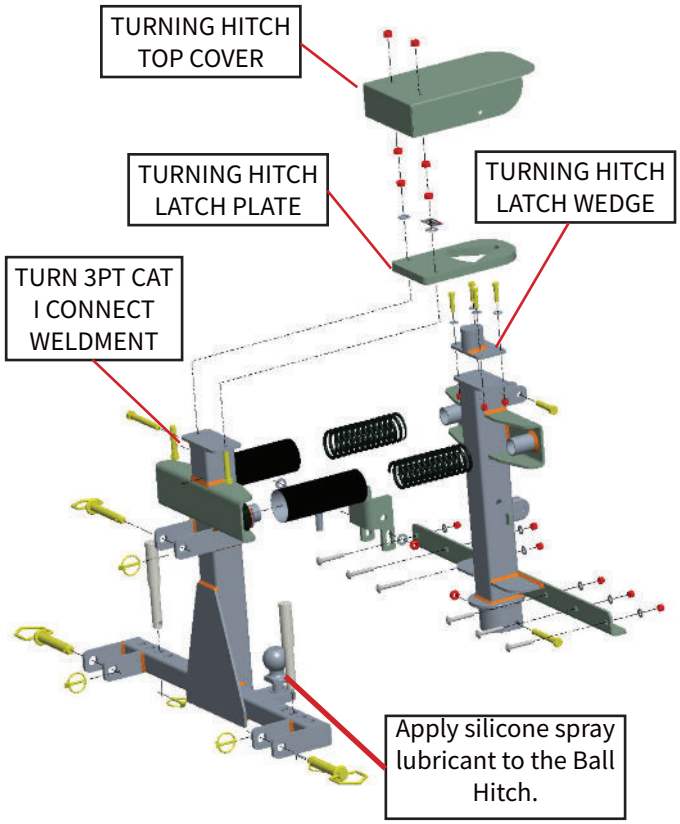

Fig 91.

Replacement Parts

1. All of the ground engaging components are considered wear parts and will need to be replaced as they wear out from use. To reorder, please contact the ABI Support department at 877-788-7253.

Troubleshooting & FAQs

Replacing damaged or worn Scarifier

Replace the Scarifier when approximately 2" to 3" of the Scarifier tip is worn away (**Fig 92**).

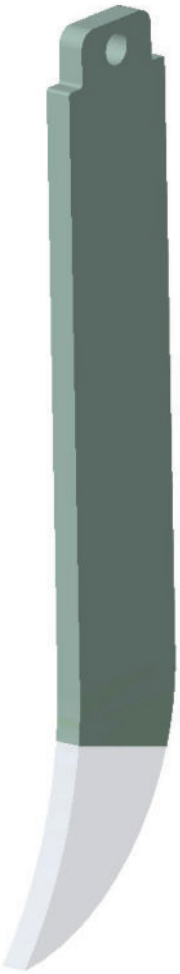

Fig 92.

1. To replace a damaged Scarifier, rotate the toplink that controls the height of the scarifier assembly until the scarifier assembly is high enough to get the damaged scarifier out (**Fig 93**).

2. Remove the pin that holds the Scarifier in position **(hold onto the scarifier while removing the pin to keep the scarifier from falling)** and pull the scarifier out (**Fig 94 and 95**).

3. Slide repaired or new scarifier into position making sure the curved portion of the scarifier is facing the same direction as the other scarifiers (**Fig 96**).

4. Re-install pin to secure scarifier (**Fig 97**).

Fig 93.

Fig 94.

Fig 95.

Fig 96.

Fig 97.

Troubleshooting & FAQs (cont'd)

Worn S-Tine Sweep (Tip)

After approximately 2/3 of the Sweep on the S-Tine is worn away, loosen the nut on the back side of the Sweep using a 13mm wrench (or adjustable wrench) and pivot the sweep 180 degrees and re-tighten the nut. This can be done with the S-Tine still attached to the arena groomer. Remove the Sweep from the S-Tine once both ends of the Sweep are worn and replace with a new Sweep (**Fig 98**).

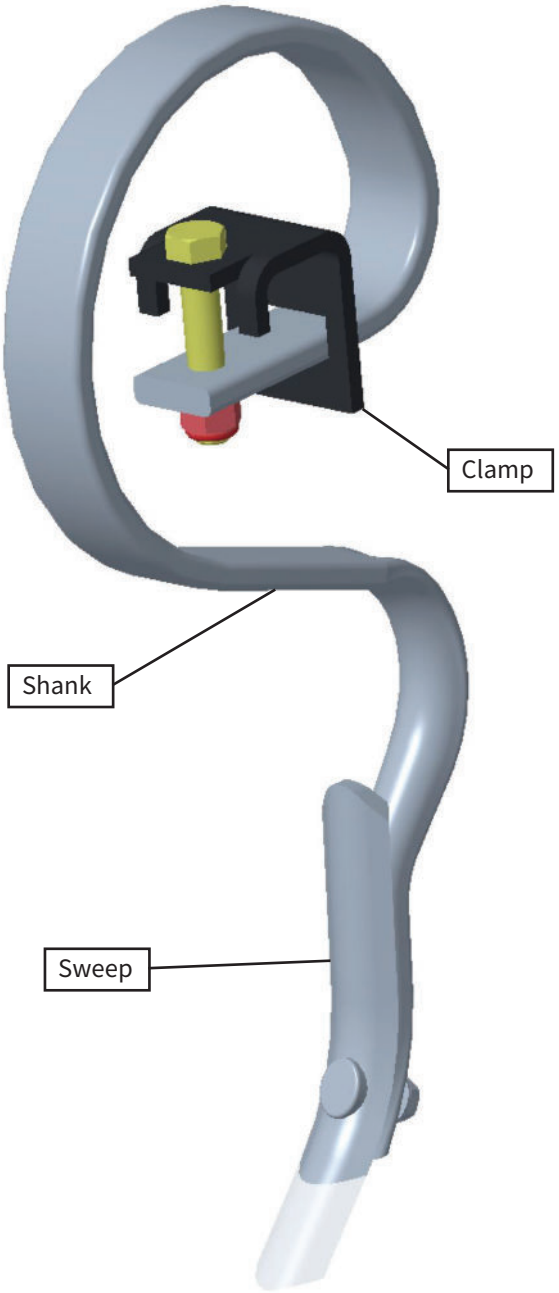

Fig 98.

Replacing damaged S-Tine Shank

1. Rotate the Toplink that raises the S-Tine assembly high enough to allow room to remove the damaged S-Tine (**Fig 99**).

2. Pull the pin that secures the pitch (angle) control lever and pull the lever all the way forward and re-insert the pin to allow more room for S-Tine removal (**Fig 100**).

NOTE: THIS MANUAL WILL SHOW HOW TO REMOVE THE S-TINE SUB-ASSEMBLY TO REMOVE A DAMAGED S-TINE. IT MAY BE POSSIBLE TO SWAP OUT AN S-TINE WHILE THE SUB-ASSEMBLY IS STILL MOUNTED TO THE GROOMER IF THERE IS ROOM FOR THE TOOLS NEEDED TO MAKE THE SWAP.

3. Pull the (4) pins that secure the (4) Pivot Lock Tubes and remove the Pivot Lock Tubes **(this may be the front or rear tube depending where the damaged S-Tine is located)** (**Fig 101, 102 and 103**).

4. On each side of the groomer on the underside of the S-Tine assembly are linkages held together by clevis pins. Remove the R-clip at the end of one clevis pin on each side of the groomer and remove the clevis pins and let the linkages hang (**Fig 104 and 105**).

NOTE: STEPS 1 THROUGH 4 APPLY TO BOTH FRONT AND REAR S-TINE SUB-ASSEMBLIES. STEPS 5 AND 6 ARE ADDITIONAL STEPS TO REMOVE THE REAR S-TINE SUB-ASSEMBLY

5. Pull the pin securing the pitch (angle) lever handle (**Fig 106**).

6. Pull off the plastic hand grip from the pitch (angle) lever handle (**Fig 107**).

7. Grab the loosened sub-assembly with both hands and pull until free from the frame (**Fig 108 and 109**).

8. Slide sub-assembly out from under the groomer and set in an area accessible to work on.

9. Before removing the damaged S-Tine, mark or etch a line next to the S-Tine to know where to mount the new S-Tine (**Fig 110**).

10. Use (2) 9/16" wrenches (recommend 1 wrench be a ratcheting wrench because of the tight working area) (**Fig 111**).

11. Slide S-Tine back out of the slot in the clamp bracket to release it from the mounting tube and remove (**Fig 112, 113 and 114**).

Troubleshooting & FAQs (cont'd)

Replacing damaged S-Tine Shank

12. Replace S-Tine clamp bracket back onto the mounting tube facing the same direction as the other clamp brackets (make sure both bent tabs on clamp bracket are on top of mounting tube). Slide new S-Tine onto mounting tube facing the same direction as the other S-Tines (**Fig 115**).

13. Slide S-Tine into slot on clamp bracket until hole in S-Tine aligns with hole in clamp bracket (**Fig 116**).

14. Insert bolt (originally removed from damaged S-Tine) into hole on clamp bracket then on through hole in S-Tine. Replace washer and nut (originally removed from damaged S-Tine) onto bolt hand tight only (**Fig 117**).

15. Align clamp bracket with mark or etched line from step 9 then tighten nut using (2) 9/16" wrenches (recommend 1 wrench be a ratcheting wrench because of the tight working area) (**Fig 118**).

16. Once the new S-Tine is mounted, slide the sub-assembly back under the groomer. Grab sub-assembly with both hands and lift and slide into slots of frame (be sure front sub-assembly is centered on frame). If rear sub-assembly is being remounted, slide lever handle up into lever bracket then slide sub-assembly into slots of frame (**Fig 119, 120 and 121**).

17. Replace the (4) Pivot lock tubes and secure them with the (4) pins (**Fig 122 and 123**).

18. If rear sub-assembly is being remounted, slide plastic grip back onto pitch (angle) lever handle (**Fig 124**).

19. Re-attach linkages on both side by replacing the clevis pins and R-clips removed in step 4 (**Fig 125 and 126**).

20. Replacing S-Tine assembly is now complete (**Fig 127**).

Troubleshooting & FAQs (cont'd)

Replacing damaged or worn Coil Tine

Replace the Coil Tine when approximately 2" TO 3" of the Coil Tine tips are worn away (**Fig 128**).

Fig 128.

Replacing damaged or worn Coil Tine

1. Rotate the Toplink that raises the Coil Tine assembly high enough to allow room to remove the front or rear Coil Tine sub-assembly with the damaged or worn Coil Tine (**Fig 129**).

2. Pull the pin that secures the pitch (angle) control lever and pull the lever all the way forward and re-insert the pin to allow more room for Coil Tine removal (**Fig 130**).

3. Pull the (4) pins that secure the (4) Pivot Lock Tubes and remove the Pivot Lock Tubes **(this may be the front or rear tube depending where the damaged Coil Tine is located)** (**Fig 131 and 132**).

4. On each side of the groomer on the underside of the Coil Tine assembly are linkages held together by clevis pins. Remove the clip at the end of one clevis pin on each side of the groomer and remove the clevis pins and let the linkages hang (**Fig 133, 134 and 135**).

NOTE: STEPS 1 THROUGH 4 APPLY TO BOTH FRONT AND REAR COIL TINE SUB-ASSEMBLIES. STEPS 5 AND 6 ARE ADDITIONAL STEPS TO REMOVE THE REAR COIL TINE SUB-ASSEMBLY

5. Pull the pin securing the pitch (angle) lever handle (**Fig 136**).

6. Pull off the plastic hand grip from the pitch (angle) lever handle (**Fig 137**).

7. Grab the loosened sub-assembly with both hands and pull until free from the frame (**Fig 138**).

8. Slide sub-assembly out from under the groomer and set in an area accessible to work on.

9. Use (2) 9/16" wrenches (or socket set) to remove damaged or worn Coil Tine as well as any other Coil Tine and linkage bracket that are in the way or removing the bad one (**Fig 139**).

10. Slide Coil Tine(s) and linkage bracket off mounting tube .

11. Slide new Coil Tine (as well any removed) onto mounting tube facing the same direction as the other Coil Tines. Re-insert bolts securing Coil Tines onto mounting tube and thread nuts onto bolts and tighten using (2) 9/16" wrenches (or socket set). If linkage bracket was removed, re-attach linkage bracket onto mounting tube in the same direction as it was before removing. Insert bolt through bracket and tube then thread nut onto bolt and tighten using 9/16" wrench (or socket set). (**Fig 140**).

Replacing damaged or worn Coil Tine

12. Once the Coil Tines and linkage bracket are mounted, slide the sub-assembly back under the groomer and complete steps 3 through 8 in reverse to re-attach the sub-assembly onto the frame. Grab sub-assembly with both hands and lift and slide into slots of frame (be sure front sub-assembly is centered on frame). If rear sub-assembly is being remounted, slide lever handle up into lever bracket then slide sub-assembly into slots of frame. Replace the (4) Pivot lock tubes and secure them with the (4) pins. If rear sub-assembly is being remounted, slide plastic grip back onto pitch (angle) lever handle (**Fig 141 and 142**).

Options

OPTIONAL BALL HITCH INSTALLATION

Use the steps below to replace the current hitch plates with optional 10-10072 Galvanized 2" Ball Hitch Coupler (**Fig 143**).

1. Remove both hitch plates using (2) 3/4" wrenches (or socket set). Set hardware aside - these will be used later to secure ball hitch to tongue (**Fig 144 and 145**).

2. Set Ball hitch (10-10072) onto tongue aligning both holes in ball hitch with holes in tongue (**Fig 146**).

3. Slide (1) washer onto both bolts (from step 1) and slide bolts through holes in ball hitch and tongue (**Fig 147**).

4. Slide (1) washer onto both bolts (from step 1) from the underside of tongue then thread (1) nut (from step 1) onto threads of bolts hand tight (**Fig 148**).

5. Tighten both nuts using (2) 3/4" wrenches (or socket set) (**Fig 149**).

6. 2" Ball hitch is now ready to use. Keep both hitch plates in case the need to switch back from the ball hitch (**Fig 150**).
